## ABSTRACT

This publication is a reference document meant to accompany other National Skill Standards Board (NSSB) publications that describe the development of skill standards, including Built to Work: A Common Framework for Skill Standards. This companion guide provides the NSSB Complexity Rating Skill Scales. Chapter 1 explains briefly how this tool fits into the NSSB's larger efforts to develop national skill standards. Chapter 2 contains the academic skill scales. These academic knowledge and skills categories are included: mathematics, science, reading, and writing. Chapter 3 contains the employability skill scales. These employability knowledge and skills categories are included: listening; speaking; using information and communications technology; gathering and analyzing information; analyzing and solving problems; making decisions and judgments; organizing and planning; using social skills; adaptability; working in teams; leading others; building consensus; and self-development and career development. In both chapters, knowledge and skills are further divided into complexity dimensions and complexity subdimensions. For each (sub)dimension, the level of complexity (low, moderate, or high) required for performing the critical work function is identified. (YLB)

# Preface

## About This Guide...

This guide includes one of the tools being used to develop NSSB skill standards. It is a companion publication to *Built to Work: A Common Framework for Skill Standards* as well as other National Skill Standards Board (NSSB) publications about skill standards.

## Who We Are...

The NSSB is a coalition of leaders from business, labor, employee, education, and community and civil rights organizations created in 1994 to build a voluntary national system of skill standards, assessment, and certification. The goal of this effort is to enhance U.S. global competitiveness

and raise the living standard of all Americans. NSSB skill standards, which form the foundation of this new system, are being identified by Voluntary Partnerships, industry coalitions working in full partnership with labor, civil rights, and community-based organizations.

# Introduction

This publication is a reference document meant to accompany other NSSB publications that describe the development of skill standards, including *Built to Work: A Common Framework for Skill Standards*. In this companion guide, you will find the NSSB Complexity Rating Skill Scales, one of several NSSB tools being used to develop skill standards.

The following is a brief explanation of how this tool fits into the NSSB's larger efforts to develop national skill standards. A complete explanation of the NSSB Common Framework for Skill Standards can be found in *Built to Work: A Common Framework for Skill Standards*. For more information about how to use the skill scales, please contact the NSSB.

## A Quick Review

Skill standards—as envisioned by the NSSB—are made up of two major components:

**The *work-oriented component***—This aspect of the skill standards looks at what needs to be done on the job and how well. It includes:

- ▲ **Critical work functions**—The major responsibilities of work.
- ▲ **Key activities**—The major duties or tasks involved in carrying out a critical work function.
- ▲ **Performance indicators**—Information on how to determine when someone is performing a key activity competently.

**The *worker-oriented component***—This aspect of the skill standards looks at the knowledge and skills someone needs to possess in order to fulfill these responsibilities.

The NSSB has identified three types of knowledge and skills:

- ▲ **Academic knowledge and skills:** The knowledge and skills associated with the academic disciplines of reading, writing, mathematics, and science.
- ▲ **Employability knowledge and skills:** The applied knowledge and skills used to perform effectively across a broad range of occupations—such as teamwork, decision making, and problem solving.
- ▲ **Occupational and technical knowledge and skills:** The occupational and technical knowledge and skills needed for work such as engine repair or database programming.

To identify knowledge and skill classifications, the NSSB convened an expert panel whose charge was to

---

## USE OF THE SKILL SCALES

---

The NSSB Complexity Rating Skill Scales were created specifically for use in developing skill standards. The tool should not be used without prior consent of the NSSB. The NSSB will be providing technical assistance and tools for using the scales.

---

create a common language for describing the academic and employability knowledge and skills.\*

## A Common Language for Knowledge and Skills

The following is a list of categories of academic and employability knowledge and skills identified as part of the NSSB Common Framework:

### *Academic Knowledge and Skills Categories*

- ▲ **Reading:** Understand and use written information that may be presented in a variety of formats, such as text, tables, lists, figures, and diagrams; select reading strategies appropriate to the purpose, such as skimming for highlights, reading for detail, reading for meaning, and critical analysis.
- ▲ **Writing:** Express ideas and information in written form clearly, succinctly, accurately, and in an organized manner; use English language conventions of spelling, punctuation, grammar, and sentence and paragraph structure; and tailor written communication to the intended purpose and audience.
- ▲ **Mathematics:** Understand, interpret, and manipulate numeric or symbolic information; solve problems by selecting and applying appropriate quantitative methods such as arithmetic, quantitative reasoning, estimation, measurement, probability, statistics, algebra, geometry, and trigonometry.
- ▲ **Science:** Understand and apply the basic principles of the physical, chemical, biological, and earth sciences; understand and apply the scientific method, including formulating

and stating hypotheses and evaluating them by experimentation or observation.

### *Employability Knowledge and Skills Categories*

- ▲ **Listening:** Attend to, receive, and correctly interpret verbal communications and directions through cues such as the content and context of the message and the tone, gestures, and facial expressions of the speaker.
- ▲ **Speaking:** Express ideas and facts orally in a clear and understandable manner that sustains listener attention and interest; tailor oral communication to the intended purpose and audience.
- ▲ **Using information and communications technology:** Select, access, and use necessary information, data, and communications-related technologies, such as basic personal computer applications, telecommunications equipment, Internet, electronic calculators, voice mail, email, facsimile machines, and copying equipment to accomplish work activities.
- ▲ **Gathering and analyzing information:** Obtain facts, information, or data relevant to a particular problem, question, or issue through observation of events or situations, discussion with others, research, or retrieval from written or electronic sources; organize, integrate, analyze, and evaluate information.
- ▲ **Analyzing and solving problems:** Anticipate or identify problems and their causes; develop and analyze potential solutions or improvements using rational and logical processes or innovative and creative approaches when needed.

\* Because the occupational and technical knowledge and skills tend to be specific to each industry sector, the NSSB did not develop a common language for this category. Instead, the NSSB developed guidelines to help describe occupational and technical knowledge and skills for each industry sector.

- ▲ **Making decisions and judgments:** Make decisions that consider relevant facts and information, potential risks and benefits, and short- and long-term consequences or alternatives.
- ▲ **Organizing and planning:** Organize and structure work for effective performance and goal attainment; set and balance priorities; anticipate obstacles; formulate plans consistent with available human, financial, and physical resources; modify plans or adjust priorities given changing goals or conditions.
- ▲ **Using social skills:** Interact with others in ways that are friendly, courteous, and tactful and that demonstrate respect for individual and cultural differences and for the attitudes and feelings of others.
- ▲ **Adaptability:** Change one's own behavior or work methods to adjust to other people or to changing situations or work demands; be receptive to new information, ideas, or strategies to achieve goals.
- ▲ **Working in teams:** Work cooperatively and collaboratively with others to achieve goals by sharing or integrating ideas, knowledge, skills, information, support, resources, responsibility, and recognition.
- ▲ **Leading others:** Motivate, inspire, and influence others toward effective individual or team work performance, goal attainment, and personal learning and development by serving as a mentor, coach, and role model and by providing feedback and recognition or rewards.
- ▲ **Building consensus:** Build consensus among individuals or groups by facilitating agreements that involve sharing or exchanging resources or resolving differences in such a way as to promote mutual goals and interests; by persuading others to change their point of view or behavior without losing their future support; and by resolving conflicts, confrontations, and disagreements while maintaining productive working relationships.
- ▲ **Self and career development:** Identify own work and career interests, strengths, and limitations; pursue education, training, feedback, or other opportunities for learning and development; manage, direct, and monitor one's own learning and development.

### Linking the Knowledge and Skills to Critical Work Functions

Using these descriptions of the academic and employability knowledge and skills, experts will identify which of these knowledge and skills are needed to perform each critical work function (along with its key activities and performance indicators).

To provide users with more detailed information, experts will identify, for a given knowledge or skill, the level of complexity required for performing a particular critical work function. The Complexity Rating Skill Scales, included in this publication, will be used as part of this effort.

Keep in mind that these scales are not for rating an individual's proficiency in a particular knowledge and skill. They are intended only for rating the level of complexity required in a particular knowledge and skill based on what the work requires.

## COMPLEXITY LEVEL SCALE

**COMPLEXITY OF MATHEMATICS CONTENT**

### NUMBER SENSE AND COMPUTATION

*How complex are the number sense and computation skills used to perform this critical work function?*

### GEOMETRY, MEASUREMENT, AND SPATIAL SENSE

*How complex are the geometry, measurement, and spatial sense skills used to perform this critical work function?*

#### HIGH

- Skills used are highly complex, including a substantial understanding of number systems (i.e., natural, whole, integer, rational, irrational, real, and complex) and properties; an ability to compare, order, and interchange equivalent fractions, decimals, and percents; and use of significant digits and precision.

- Skills used are highly complex, including a substantial understanding of geometry, measurement, and spatial sense; use of complex geometric terminology, techniques, and tools to measure quantities in order to achieve specified degrees of precision, accuracy, and error (or tolerance); use of right triangle trigonometry to find missing information about triangles; use of vectors; and estimation of volumes and surface areas of complex shapes and real objects.

#### MODERATE

- Skills used are moderately complex, including an understanding of number systems (i.e., whole, rational, and irrational) and properties; an ability to read, write, order, add, subtract, multiply, and divide decimal numbers; an ability to interchange equivalent fractions, decimals, and percents; and use of ratios and proportions.

- Skills used are moderately complex, including an understanding of geometry, measurement, and spatial sense; use of a variety of geometric shapes and terms; calculation of the perimeter, circumference, area, volume, and surface area of various two- and three-dimensional objects to specified degrees of precision; and use of the Pythagorean theorem, its converse, and properties of special right triangles to find missing information about triangles.

#### LOW

- Skills used are minimally complex, including a basic understanding of whole number systems and properties; an ability to read, write, order, add, subtract, multiply, and divide whole numbers; an ability to read and write simple fractions and decimals; and computation of money in dollars and cents.

- Skills used are minimally complex, including a basic understanding of geometry, measurement, and spatial sense; use of basic geometric shapes and terms with concrete objects or drawings; measurement of length, area, perimeter, circumference, diameter, height, weight, and volume to specified degrees of precision in both the customary and metric systems; and computation of time in hours and minutes.

**COMPLEXITY OF DATA ANALYSIS, STATISTICS, AND PROBABILITY**

*How complex are the data analysis, statistics, and probability skills used to perform this critical work function?*

**COMPLEXITY LEVEL SCALE**

**HIGH**

**MODERATE**

**LOW**

- Required skills are highly complex, including a substantial understanding of data analysis, statistics, and probability; an ability to design and conduct statistical experiments to study a problem; interpretation and communication of the results using appropriate technology; interpretation and representation of data, comparing distributions of data and critiquing conclusions and the use of statistics; fitting of curves to scatter plots to determine the strength of the relationship between two data sets; use of sampling techniques to draw inferences about large populations; use of experimental and theoretical probability and combinations and permutations to solve problems; and use of application software to analyze and display data.
- Required skills are moderately complex, including an understanding of data analysis, statistics, and probability; an ability to gather, organize, represent, and interpret large sets of data; analysis and display of data with respect to frequency, distribution, and central tendencies (e.g., mode, range, mean, and median); evaluation of arguments based on statistical reasoning; determination of experimental and theoretical probabilities; and use of counting techniques to determine possible outcomes.
- Required skills are minimally complex, including a basic understanding of data analysis, statistics, and probability; an ability to collect, organize, and describe data; construction and display of data in line plots, graphs, tables, and charts; interpretation of data using the concepts of largest, smallest, most often, and middle; an ability to find average (mean) of sets of data; and determination of fairness and probability outcomes.

**COMPLEXITY OF REPRESENTATION AND COMMUNICATION**

*How complex are the representation and communication skills used to perform this critical work function?*

- Skills used are highly complex, including representation and communication of complex mathematical ideas using mathematical language to make complex situations easier to understand; an ability to organize work and present mathematical procedures and results clearly, systematically, succinctly, and correctly; clear communication of logical arguments, showing why a result makes sense and why the reasoning is valid; and an ability to write succinct accounts of the mathematical results obtained with diagrams, graphs, tables, and formulas integrated into the text.

- Skills used are moderately complex, including representation and communication of moderately complex mathematical ideas using numerical tables and equations, simple algebraic equations and formulas, charts, graphs, and diagrams; an ability to explain facets of a solution orally and in writing; and an ability to label drawings and use other techniques to make meaning clear to the audience.

- Skills used are minimally complex, including representation and limited communication of basic mathematical ideas using words, numbers, symbols, pictures, charts, graphs, and tables.

## COMPLEXITY LEVEL SCALE

**COMPLEXITY OF PROBLEM SOLVING**

**MATHEMATICAL METHODS**

*How complex are the mathematical methods used to perform this critical work function?*

**MATHEMATICAL REASONING**

*How complex is the mathematical reasoning used to perform this critical work function?*

**HIGH**

**MODERATE**

**LOW**

- Problems require generation of multiple approaches to allow for comparison of results. Methods are highly complex and include formulating and carrying out detailed solutions to complex problems using multiple steps and appropriate problem-solving techniques; verifying the accuracy and validity of the mathematical procedures used to solve problems; and evaluating the validity and generalizability of results.
- Reasoning used is highly complex, including using forms of reasoning and proof appropriate to solve the problem at hand (e.g., deductive and inductive reasoning, making and testing conjectures, using counterexamples and indirect proof) and differentiating clearly between giving examples that support a conjecture and giving a proof of that conjecture.
- Problems lend themselves to multiple solutions. Methods are moderately complex and include using appropriate computational procedures; evaluating approaches for effectiveness and making adjustments; using ratios, rates, and reason appropriately to solve problems; considering, testing, and justifying more than one solution; and generalizing solutions and strategies to new problem situations.
- Reasoning used is moderately complex, including making and investigating conjectures, developing and evaluating mathematical arguments and proofs, and selecting and using a variety of reasoning and methods of proofs as appropriate.
- Problems lend themselves to a single solution that produces clear or obvious results. Methods are minimally complex and include determining what a problem is asking; making sensible, reasonable estimates; and using a variety of approaches to solve problems.
- Reasoning used is minimally complex, including formulating conjectures and being able to argue why they must be or seem true; making sensible, reasonable estimates; and making justified, logical statements.

## COMPLEXITY LEVEL SCALE

**COMPLEXITY OF CORE SCIENTIFIC CONTENT**

**EARTH AND SPACE SCIENCE**

*To what degree is an understanding of earth and space science used to perform this critical work function?*

**COMPLEXITY OF APPLIED SCIENCE**

**SCIENCE AND TECHNOLOGY**

*To what degree is an application of science and technology required when performing this critical work function?*

**SCIENCE IN PERSONAL AND SOCIAL PERSPECTIVE**

*To what degree is an understanding of how science affects the individual and the community used to perform this critical work function?*

**HIGH**

- A substantial understanding of earth and space science concepts is used (e.g., energy in the Earth system, geochemical cycles, origin and evolution of the Earth system, evolution of the solar system, natural resource management).
- Application of science and technology is used to design and implement a solution to a complex problem, choosing among several alternative approaches; design takes into consideration time constraints, costs, risks, and benefits.
- A substantial understanding of how science affects the individual and the community is used (e.g., personal and community health, consequences of overpopulation, causes and effects of natural and human-induced hazards).

**MODERATE**

- A moderate understanding of earth and space science concepts is used (e.g., structure of the Earth system; Earth's history and processes including erosion and plate movement; change over time and fossil evidence; Earth in the solar system, including predictable motion of planets and moons).
- Application of science and technology is used to design and implement a solution to a moderately complex problem; timely results are required.
- A moderate understanding of how science affects the individual and the community is used (e.g., personal health and nutrition, population growth trends, consequences of natural hazards).

**LOW**

- A basic understanding of earth and space science concepts is used (e.g., properties of Earth materials such as water, gases, rocks, and soils; characteristics of the sun, moon, planets; importance of the sun; forces that alter the Earth's surface such as weathering, volcanism, and earthquakes).
- Application of science and technology is used to identify a solution to a simple problem such as building or improving a basic product.
- A basic understanding of how science affects the individual and the community is used (e.g., personal health awareness, population characteristics, environmental changes).

## READING

Understand and use written information that may be presented in a variety of formats, such as text, tables, lists, figures, and diagrams; select reading strategies appropriate to the purpose, such as skimming for highlights, reading for detail, reading for meaning, and critical analysis.

**COMPLEXITY OF TEXT**  
How complex is the type of material to be read when performing this critical work function?

- Highly complex or technical materials are read (e.g., technical manuals, reports, proposals, procedures, written commentaries, formal email, substantially visual material such as flowcharts); material contains high density of information and a substantial proportion of highly technical terms or unfamiliar vocabulary.

- Moderately complex or technical materials are read (e.g., letters, memos, email, multistep directions and instructions, reference materials, books on particular topics, visuals that support meaning such as charts, graphs, figures, diagrams, and maps).

- Simple, familiar, or non-technical materials are read (e.g., labels, telephone messages, routine forms, lists, simple notes, signs, informal email).

**COMPLEXITY OF READING SKILLS**  
How complex are the reading skills used to perform this critical work function?

- Reading skills used are highly complex, including evaluation of the effectiveness of the text (i.e., its relevance, accuracy, efficiency, and appropriateness) and analysis of arguments and positions as to their validity, degree of bias and sufficiency of evidence.

- Reading skills used are moderately complex, including interpretation of information from multiple sources; integration of information with prior knowledge and experiences; and identification of complexities and discrepancies in the presented information.

- Reading skills used are minimally complex, including comprehension of simple written information to solve basic problems; literal understanding of text; and application of basic features of reading such as phonics; syllabication, and word parts.

**COMPLEXITY OF READING PURPOSE**  
How complex is the reading purpose in performing this critical work function?

- Reading purpose is highly complex; text is analyzed and evaluated, and information is applied to a new situation or task.

- Reading purpose is moderately complex; text is read to obtain information that is then communicated to others or used to perform a multistep task.

- Reading purpose is minimally complex; text is read to obtain general information or follow simple instructions to perform a task.

**TYPE OF PRODUCT**

*How complex are the materials produced in performing this critical work function?*

- The materials produced are highly complex or technical (e.g., technical manuals, reports, proposals, procedures, written commentaries, formal email, substantially visual products such as flowcharts).

- The materials produced are moderately complex (e.g., letters, memos, email, multistep directions and instructions, and visuals that support meaning such as charts, graphs, figures, diagrams, and maps).

- The materials produced are simple, familiar, and nontechnical (e.g., labels, telephone messages, routine forms, lists, tables, simple notes, signs, and informal email).

COMPLEXITY OF WRITING PRODUCT

**ORGANIZATION**  
*To what degree is product organization used to perform this critical work function?*

- A high degree of focus and logic is used, providing facts, details, and explanations grouped in a way that communicates clearly; writer anticipates needs and concerns of audience and may create layout or format for product; revisions highlight individual voice and style, using sentence variety and subtlety of meaning and tone for intended purpose and audiences.

- A moderate degree of organization and focus is used, providing needed facts and information; writer decides on most appropriate format; revisions are based on own review and on feedback from others.

- A minimal degree of organization is used; format is provided (e.g., labels, forms); minimal revision is required; writing is revised for basic grammar and usage.

**ELABORATION**  
*To what degree is elaboration required to convey meaning in performing this critical work function?*

- Accurate, sufficient, and accessible elaboration and explanations are used, providing specific facts and other information, to support and convey meaning.

- Moderate elaboration is used, providing some examples and reasons, to convey meaning.

- Minimal elaboration is needed to convey meaning.

COMPLEXITY OF WRITING PROCESS

**WRITING DEVELOPMENT**  
*How complex is the level of writing development used to perform this critical work function?*

- A highly complex level of writing development is used, including evaluation of the effectiveness of own writing—including accuracy, efficiency, appropriateness of presented information—for clarity in communication and style; anticipation of possible effect of writing on intended audience.

- A moderately complex level of writing development is used, including interpretation of information from multiple sources and synthesis with prior knowledge and experiences; identification of complexities and discrepancies in the information; application of precise word choice and appropriate tense for clarity in communication and individual style.

- A minimally complex level of writing development is used, including application of formal conventions of the English language, including spelling, grammar, usage, punctuation, simple paragraph structure, and simple sentence construction.

## COMPLEXITY LEVEL SCALE

COMPLEXITY OF WRITING PURPOSE

**TO INFORM**

*To what degree are different strategies used to inform the reader in performing this critical work function?*

**TO PERSUADE**

*To what degree are persuasive arguments used to influence the reader in performing this critical work function?*

**HIGH**

- Multiple strategies (e.g., generalizations, examples, compare or contrast, question and answer) are incorporated and integrated to inform the reader.

- Complex logical arguments are used to persuade the reader; complex and varied details, supporting information, and evidence from multiple sources are used; author is aware of reader's possible preference for reasons, details, explanations, and examples.

**MODERATE**

- One or two different strategies (e.g., classification or categorization of information) are applied to inform the reader.

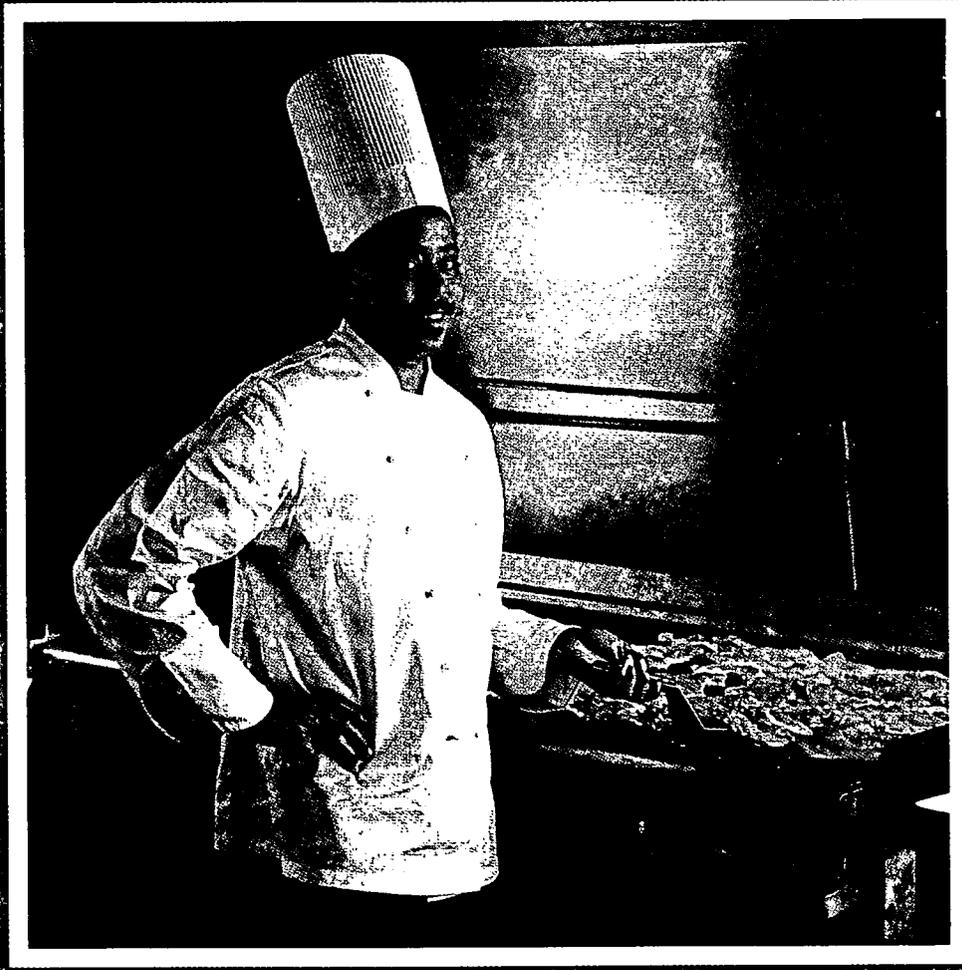

- Moderately complex logical arguments are used to persuade the reader; some supporting information or evidence is used.

**LOW**

- Minimal strategies (e.g., lists) are applied to inform the reader.

- Minimally complex logical arguments are used to persuade the reader; writing is generally directed to a single audience.

# GATHERING AND ANALYZING INFORMATION

Obtain facts, information, or data relevant to a particular problem, question, or issue through observation of events or situations, discussion with others, research, or retrieval from written or electronic sources; organize, integrate, analyze, and evaluate information.

**COMPLEXITY DIMENSION**  
**COMPLEXITY SUBDIMENSION**

## COMPLEXITY LEVEL SCALE

**HIGH**

**MODERATE**

**LOW**

**DIFFICULTY OF INFORMATION GATHERING**

**AMOUNT OF INFORMATION**  
*How much information needs to be gathered to perform this critical work function?*

- An extensive amount of information is required.

- A moderate amount of information is required.

- A limited amount of information is required.

**NUMBER AND VARIETY OF SOURCES**  
*In performing this critical work function, how many and how variable are the sources from which information must be gathered and the methods used to gather it?*

- A large number of widely different sources (e.g., written, oral, electronic) are required; many different information-gathering methods are used.

- A moderate number of somewhat different sources are required; several different information-gathering methods are used.

- A small number of similar sources are required; one or two information-gathering methods are used.

**RESOURCEFULNESS NEEDED**  
*To what degree are information sources unknown, unclear, or difficult to access when performing this critical work function?*

- Information sources are largely unknown, requiring individual to perform groundwork and develop own leads.

- Information sources are partially defined or known, but additional research may be required after initial information gathering.

- Sources of information are well established and easily accessible.

## COMPLEXITY LEVEL SCALE

COMPLEXITY OF ANALYSIS

### COMPLEXITY OF INFORMATION AND ANALYSIS

*In performing this critical work function, how complicated or technical is the information to be analyzed, and how rigorous or sophisticated is the analysis required?*

### NEED TO EVALUATE SOURCE INFORMATION

*In performing this critical work function, to what degree must information or its sources be evaluated for credibility or relevance?*

### LACK OF ANALYSIS GUIDELINES

*In performing this critical work function, to what degree is the organization or analysis of information challenged by a lack of available guidelines?*

### HIGH

- Information is highly complex or technical, requiring rigorous or sophisticated analytic approaches.

- Most information is of questionable or unknown reliability, requiring substantial vetting of information or sources; relevance of information is difficult to discern.

- Little or no guidelines, precedents, or models are available to guide organization or analysis of information.

### MODERATE

- Information is moderately complex or technical or is of varying complexity, requiring analytic approaches of moderate or varying rigor or sophistication.

- Some information is of questionable or unknown reliability, or information is of varying reliability, requiring some vetting of information or sources; relevance of information is sometimes apparent.

- Some guidelines, precedents, or models are available to guide organization or analysis of information, or such guidance is available for some of the information.

### LOW

- Information is simple, straightforward, or non-technical, requiring simple analytic approaches.

- Most information is of known reliability, requiring no further vetting of information or sources; relevance of information is obvious.

- Information is organized or analyzed on the basis of well-established guidelines, precedents, or models.

**WORK CHALLENGES**

**SCOPE AND COMPLEXITY OF LEADERSHIP RESPONSIBILITY**

*In performing this critical work function, to what degree does work entail leadership of large, diverse, or geographically dispersed groups or teams?*

• Leadership is responsible for multiple or large groups comprised of individuals who are highly diverse in their demographics (e.g., race, gender, age, culture, education, experience), roles or functions, or levels of expertise or who are dispersed geographically.

• Leadership is responsible for a few small groups or a single moderately large group comprised of individuals who are somewhat diverse in their demographics (e.g., race, gender, age, culture, education, experience), roles or functions, or levels of expertise or who may be separated geographically from the others.

• Leadership is responsible for a single small group comprised of individuals who are relatively homogeneous in their demographics, roles or functions, or levels of expertise and who are located in the same geographic area.

**PEOPLE CHALLENGES**

**COACHING OR MONITORING NEEDS**

*How much staff coaching, mentoring, direction, and oversight is needed to perform this critical work function?*

• A high degree of coaching or oversight is needed because of limited capabilities or self-direction of staff.

• A moderate or varying degree of coaching or oversight is needed because of varying capabilities or self-direction of staff.

• A minimal degree of coaching or oversight is needed because of high capabilities or self-direction of staff.

**CONFLICT MANAGEMENT NEEDS**

*In performing this critical work function, how much conflict management is required as a result of the nature of the work or the diversity of the staff?*

• Many internal conflicts or sensitivities must be managed.

• A moderate or varying degree of internal conflicts or managed sensitivities must be managed.

• Few internal conflicts or sensitivities must be managed.

## BUILDING CONSENSUS

*Build consensus among individuals or groups by facilitating agreements that involve sharing or exchanging resources or resolving differences in such a way as to promote mutual goals and interests; by persuading others to change their point of view or behavior without losing their future support; and by resolving conflicts, confrontations, and disagreements while maintaining productive working relationships.*

**COMPLEXITY SUBDIMENSION**

**HIGH**

**MODERATE**

**LOW**

**CONSENSUS PROCESS INHIBITORS**

**LACK OF ORGANIZATIONAL SUPPORT, INCENTIVES, OR CONSENSUS LEADERSHIP**

*In performing this critical work function, to what degree is the consensus process impeded by an absence of organizational support or incentives to reach consensus or by an absence of an influential leader or facilitator of consensus?*

- Minimal or no organizational support or other incentives are present; consensus is impeded by the absence of a leader or neutral party with relevant knowledge and expertise or authority to intervene.

- A moderate or varying degree of organizational support or other incentives are present; consensus is facilitated somewhat by the presence of a leader or neutral party with either relevant knowledge and expertise or authority to intervene or force agreement.

- A high degree of organizational support or other incentives are present; consensus is facilitated greatly by the presence of a leader or neutral party with relevant knowledge and expertise and authority to intervene or force agreement.

**HIGH CONSENSUS STANDARD**

*What extent of agreement must be reached to achieve consensus in performing this critical work function?*

- Unanimous agreement is required.

- Less than unanimous agreement is required.

- Majority or plurality of agreement is required.

**DIFFICULTY OF ISSUES REQUIRING CONSENSUS**

**COMPLEXITY OF ISSUES**

*How complex are the issues on which consensus is sought in performing this critical work function?*

- Issues are complex and multifaceted.

- Issues are moderately complex, variable in their complexity, or may have several facets.

- Issues are simple and straightforward, with few underlying facets.

DIFFICULTY OF ISSUES REQUIRING CONSENSUS

### CONTENTIOUSNESS OF ISSUES

*In performing this critical work function, to what degree are the issues on which consensus is sought sensitive, personal, or contentious, eliciting varying or divergent expectations, perspectives, or opinions?*

### LACK OF OPPORTUNITIES FOR AGREEMENT

*In performing this critical work function, to what degree does the nature of the issues make resolution or compromise difficult?*

- Issues are highly sensitive, personal, or contentious and tend to elicit widely varying or divergent expectations, perspectives, or opinions.

- Issues are structured or characterized in a way that provides few possibilities for resolution or compromise.

- Issues are moderately sensitive, personal, or contentious and tend to elicit somewhat varying or divergent expectations, perspectives, or opinions.

- Issues are structured or characterized in a way that provides some possibilities for resolution or compromise.

- Issues are nonsensitive, impersonal, or noncontentious and tend to elicit minimally varying or divergent expectations, perspectives, or opinions.

- Issues are structured or characterized in a way that provides many possibilities for resolution or compromise.

NEED FOR LEARNING AND DEVELOPMENT

#### SELF AND CAREER DEVELOPMENT REQUIREMENTS

*In performing this critical work function, to what degree is planning for and engagement in self or career development activities required?*

- Frequent or rapid changes in work content or technology necessitate continuous planning for and engagement in learning and development activities.

- Somewhat frequent or gradual changes in work content or technology necessitate planning for and engagement in learning and development activities at regular intervals.

- Infrequent or slow changes in work content or technology necessitate little or no planning for or engagement in learning and development activities.

LIMITATIONS ON LEARNING AND DEVELOPMENT OPPORTUNITIES

#### TIME, RESOURCE, OR SUPPORT CONSTRAINTS

*In performing this critical work function, to what degree are learning and development opportunities limited by available time, resources, or organizational support?*

- Learning and development opportunities are highly limited.

- Learning and development opportunities are somewhat limited.

- Learning and development opportunities are readily available.

# Acknowledgments

The NSSB acknowledges the excellent work of the Advisory Panel on a Common Language for Skill Standards who developed the skill scales included in this guide.

## Panel members include

**Joan E Knapp, Ph.D.**, Chief Executive Officer, Knapp and Associates

**Kenneth Pearlman, Ph.D.**, Member, Endorsement Review Panel, NSSB

**Elaine Rosborough-Williams**, Workforce Development Specialist, Goodwill Industries

**Leo Reddy**, President, National Coalition for Advanced Manufacturing

**Sondra G. Stein, Ph.D.**, Senior Research Associate and Director, Equipped for the Future, National Institute for Literacy

**John Tippie**, Associate Director, Laborers-AGC Education and Training Fund

**Paul Weckstein**, Co-Director, Center for Law and Education.

**Sri Ananda, Ph.D.**, Co-Director, Assessment and Standards Development Services, West Ed

**Alyce Louise Bertsche**, President, Performance Consulting, Inc.

**Ann Borthwick**, Director, Standards Development, New Standards/National Center on Education and the Economy

**Michael A. Campion, Ph.D.**, Professor of Management, Purdue University Krannert Graduate School of Management

**Linda Drake**, Manager, Strategic Programs, Motorola

**Evelyn Ganzglass**, Policy Studies Director, Employment and Social Services Division, National Governors Association for Best Practices

**Joseph T. Hersh**, Regional Director, Department of Labor, Bureau of Apprenticeship and Training

## Panel Staff and Consultants

**James B. Hogan, Ph.D.**, Research Project Manager, Carl Vinson Institute of Government, University of Georgia

**Michelle R. Dela Rosa, Ph.D.**, Senior Scientist, Human Resources Research Organization (HumRRO)

**Rodney A. McCloy, Ph.D.**, Principal Staff Scientist, Human Resources Research Organization (HumRRO)

**Betsy Brown Ruzzi**, Director, Development and National Affairs, National Center on Education and the Economy.

Edie West  
NSSB Executive Director

# Board Members

## **NSSB Chairman:**

**James R. Houghton**  
Chairman of the Board, Emeritus  
Corning, Incorporated

## **NSSB Vice Chairs:**

**James Burge**  
Former Corporate Vice President &  
Director of Governmental Affairs  
Motorola, Inc.

**Paul F. Cole**  
Secretary Treasurer  
New York State AFL-CIO  
Vice President  
American Federation of Teachers

**William E. Weisgerber**  
Former State Director  
Michigan Department of Education's Office of  
Career and Technical Education

## **NSSB Members:**

**Earline Ashley**  
Executive Director  
Rankin County Human Resource Agency

**Susan Auld**  
President  
Auld, Bishop and Adams

**George Becker**  
President  
United Steelworkers of America

**George Bliss**  
Director of Training  
United Association of Journeymen and  
Apprentices of the Plumbing and Pipe Fitting  
Industry of the United States and Canada

**Terrance Craney**  
President  
Wisconsin Education Association Council

**Kenneth Edwards**  
Former Director of Research and Technical  
Services  
International Brotherhood of Electrical Workers

**Tim C. Flynn**  
Chairman  
Lodge Net Entertainment

**Barbara Kairson**  
Administrator  
District Council 37 Education Fund  
American Federation of State, County, and  
Municipal Employees

**Ray Marshall**  
Audre & Bernard Rapoport Centennial Chair,  
Emeritus in Economics and Public Affairs  
University of Texas  
LBJ School of Public Affairs

**Jon A. Reeves**  
Partner  
Reeves and Williams Builders

**Ronald K. Robinson**  
President  
International Longshoremen's Association

**Marc S. Tucker**  
President  
National Center on Education & the Economy

**Jerald Tunheim**  
President  
Dakota State University

**Anne-Lee Verville**  
Former General Manager of Worldwide Education  
Industry  
IBM Corporation

**Carolyn Warner**  
President  
Corporate Education Consulting, Inc.

**Alan L. Wurtzel**  
Vice Chairman of the Board  
Circuit City Stores, Inc.

**Ex Officio Members:**  
**The Honorable Alexis M. Herman**  
Secretary  
U.S. Department of Labor

**The Honorable William M. Daley**  
Secretary  
U.S. Department of Commerce

**The Honorable Richard W. Riley**  
Secretary  
U.S. Department of Education

**Former NSSB Members:**  
**Bruce Carswell**  
Former Sr. Vice President, Human Resources &  
Administration  
GTE

**William Crotty (Deceased)**  
Former Senior Partner  
Black, Crotty, Sims, Hubka, Burnett,  
Birch & Samuels

**Marcia Greenberger**  
Founder and Co-President  
The National Women's Law Center

**Dr. Herbert J. Grover**  
Former Superintendent of Public Instruction  
State of Wisconsin

**Yvette Herrera**  
Administrative Assistant to the President  
Director of Education  
Communications Workers of America

**Mayor Vera Katz**  
City of Portland

**Hugh B. Price**  
President & Chief Operating Officer  
National Urban League, Inc.

**Michael Riccards**  
President  
Fitchburg State College

**Raymond J. Robertson**  
General Vice President & Executive Director of  
Apprenticeship Training  
International Association of Bridge, Structural,  
Ornamental and Reinforcing Iron Workers

**Stephen Sayler**  
Human Resource Manager  
Toys R Us

**Katherine Schrier**  
Former Administrator  
District Council 37 Education Fund  
American Federation of State, County, and  
Municipal Employees

**Dr. Esteban Soriano**  
Vice President for University Advancement  
California State Polytechnic University, Pomona

**John T. Smith**  
Administrative Assistant to the International  
President & Director United Steelworkers of  
America, AFL-CIO-CLC and the Director of  
the USWA Dislocated Workers Program  
(Retired)
